

Thank you for using SAGORA, follow these steps for a correct installation in Windows:

- If you don't have an audio card that comes with ASIO drivers, download and install ASIO4ALL

- Download the file `sagora.servidores.zip` from:  
<https://sagora.org/INSTALADORES/servidores.sagora.zip>

- Unzip the file `sagora.servidores.zip`, there you will find a file.

- Copy and paste that file in your Documents folder (or documents), this file will allow you to use the servers that SAGORA has deployed for now. Otherwise the program will not run correctly.

- Download the SAGORA version in a zip file

- Unzip the file, inside is the executable `Sagora.exe`

- End
